Meetings will be held at the VFW in McHenry (3002 w IL Rt 120) the 1st Wednesday of every month 7:30pm - 9:00pm.
April - November.

Please send fish pictures and stories to
william.spoonplugger.lorch@gmail.com

The new Northern Illinois Spoonpluggers club T-Shirts are ready

T-Shirts will be available for observation at the June meeting. The old style black and white shirts were upgraded to a more pronounced design that everyone is sure to like.

The new shirt design is three colors and features two different color schemes that really stands out. The club also has two styles of embroidered Spoonplugs pictured above and a red and white not shown in the works. They can be embroidered on jackets, polo shirts and hats. Members will soon be able to buy embroidered polo shirts and hats. All shirts are special order and must be paid for in advance. Shirts will be ready by the next months meeting. Black and white shirts are \$25.00 and the new three color shirts are \$30.00. The prices on the embroideries are yet to be determined.

Jerry and Toni went to Green bay for some of those Green bay eyes. Fishing was tough for a while but their hard work and perseverance led them to an impressive stringer of walleyes. Great job guys

BUCK SEZ

WEATHER AND WATER

In our past study, we have stressed the importance of fish movement, and the importance of the areas to which they move. In all the study, we've been wanting to relate the weather and water conditions, and the part they played in the movements of the fish. The bottom fact is, the weather and water conditions will be the final judge just how well you and I do. It will determine if fishing will be easy or hard. It will determine just how successful you will be on any given trip. There is only one for you and I can do about the weather and the water conditions. But, if we understand the effect of the weather and water conditions have upon the fish, then we are more able to cope with the situation as they arise. It is in this area that our knowledge of fish movements, offshore, inshore, breaks, etc., comes into the picture so that we can offer as much as possible the effects of weather and water conditions. It is through this knowledge we are able to become better of the game, and have success when other fishermen fail.

The study of weather and water is very broad, but in our study, we will try to do it in as small a part as possible. We will continue to talk about our study till the time, as the weather and water conditions prove as a guide for the other species. When called for, we will note the slight differences that might occur in different species.
